

FOURTH QUARTER 2021

## AND THE BAND PLAYED ON

The Titanic took approximately two hours and forty minutes from its initial iceberg collision to its foundering. The ship's band — hoping to help keep passengers calm — continued to play (waltzes and ragtime numbers\*) for nearly all of that time, only stopping less than thirty minutes prior to the ship going under. Today's financial markets also keep "playing" amid threats of sinking economic prospects. Global equity markets gained 7% in the quarter (and 19% on the year) despite an ongoing pandemic and the 10-year Treasury yield closed out the year at a once unthinkable 1.5% despite high inflation (7%). How should we think about this heading into 2022?

**The unsinkable Titanic.** It was said "God himself could not sink this ship." With 16 airtight hull compartments — four of which could fill without the ship losing buoyancy — the claim seemed credible. Short of divine intervention, today's financial markets also seem unsinkable. Even in the face of 30-year inflation highs, corporate profit margins have increased and stock valuations remain elevated. A once-in-a-century pandemic has not slowed markets either; global equities are up 30% since COVID's start. Beyond healthy corporate fundamentals, low interest rates and well-functioning credit markets are providing a ballast. The current 1.5% yield on the 10-year U.S. Treasury (UST) is about as low as interest rates have gone. Outside of the worst of the pandemic (where the 10-year UST yield hit 0.5%), the all-time low is 1.4% (set in July 2016).

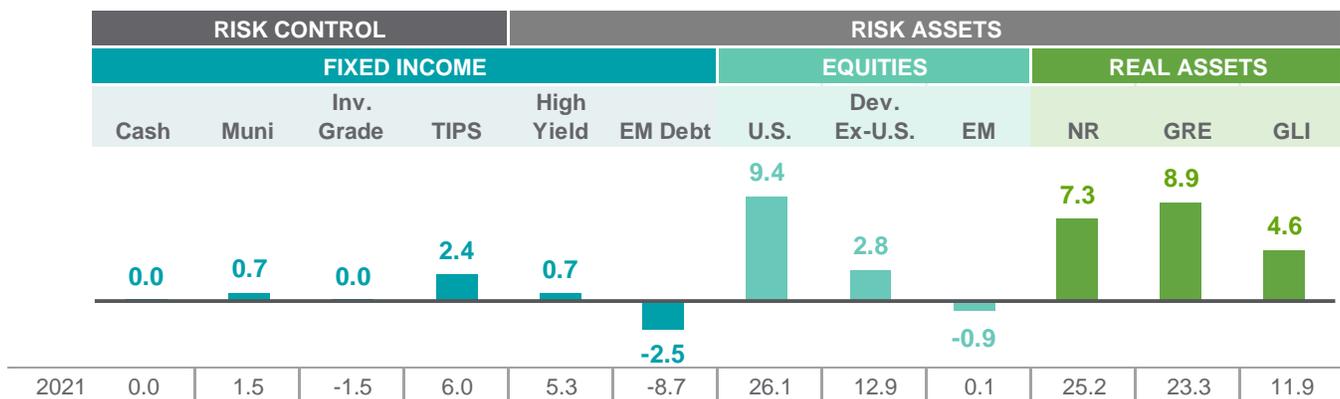

**Watching out for icebergs.** So, what could sink this ship? Federal Reserve action is high on the list. Should inflation persist and the Fed be forced to raise interest rates more than investors anticipate, stock markets could suffer. Investors are already braced for more restrictive central banks in 2022; consensus calls for the Fed to raise rates roughly three times in 2022 — so there is some cushion. Another obstacle for the economy to navigate is the reduced thrust from fiscal policy as the past two years of stimulus is not repeated. The consumer and investment engines will need to fire to fill the void.

**The importance of being prepared.** Perhaps due to overconfidence in the Titanic's ability to stay afloat, the ship was woefully short on lifeboats (about one-third of what was needed). As a result, of the 2,000+ passengers on board, only around 700 survived. Surviving a fall in the stock market comes down to ensuring sufficient risk-control assets (investment grade fixed income, inflation-linked bonds and cash) aligned with risk tolerance. Some question the ability for longer duration bonds to provide the same level of protection as they have historically given currently low interest rates with upside risk. But never have investment grade bonds been significantly correlated with stocks (>0.5); and, at the very least, these bonds would still provide significant downside protection.

*\*The last song played is widely believed to be "Nearer, My God, to Thee" but cannot be confirmed; some argue the bandleader (Wallace Hartley) would never have played such a solemn hymn.*

### FOURTH QUARTER 2021 TOTAL RETURNS (%)

Most risk assets rebounded nicely in the fourth quarter — even in the face of ongoing pandemic and inflation headwinds.

**KEY DEVELOPMENTS**

**Time for the Consumer to Step Up**

A key risk heading into 2022 is the need for the private sector — both the consumer and corporations (in the form of capital expenditures/investment) — to fill in for less government stimulus. As seen in the chart, budget deficits are set to be cut in half over the next year. While governments will still be spending, it's the year-over-year (y/y) change that impacts economic growth — and that y/y change will be negative. Incidentally, less government debt issuance also mutes the impact of reduced central bank purchase programs.

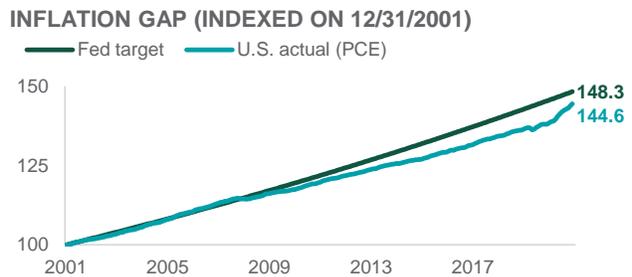

**FISCAL DEFICITS AROUND THE WORLD**

**Inflation is Playing Catch Up**

Last year brought us something we haven't seen in a while: Inflation. The broadest measure of U.S. inflation (Consumer Price Index) was up 7% last year, while the Fed's preferred measure (core Personal Consumption Expenditure) was up 5%. While something to watch, it's worth noting the U.S. (and most other countries around the world) are still playing catch up to the 2% trajectory most central banks target (see chart, showing the past 20 years). As such, central banks may be more tolerant of inflation — but not too tolerant.

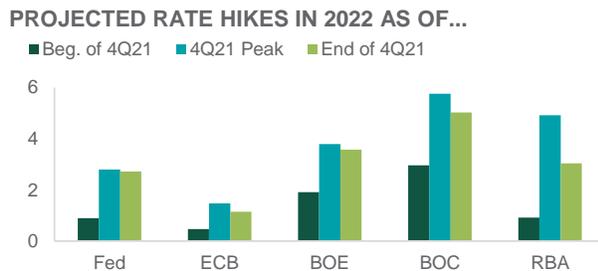

**INFLATION'S 20 YEAR TRAJECTORY**

**Monetary Policy Expectations Have Gone Up**

Because of higher inflation, investors have moved up their expectations for central bank tightening. Focusing on the Fed, its fourth quantitative easing program is scheduled to wrap up by mid-year and markets have now priced in around three rate hikes in 2022. Other central banks — including the European Central Bank (ECB); Bank of England (BOE); Bank of Canada (BOC) and Royal Bank of Australia (RBA) — saw adjustments higher last quarter as well (see chart). Risk assets likely can tolerate some rate hikes, but not too many.

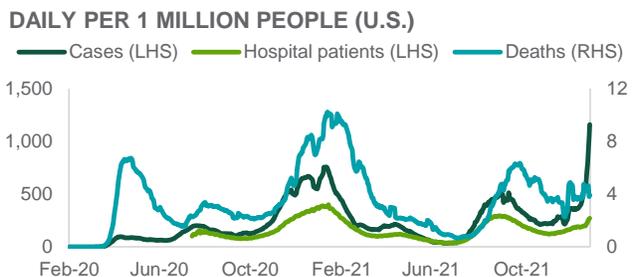

**EXPECTED MONETARY POLICY IN 2022**

**COVID Deaths Not Going Up (as Much)**

Unfortunately, the pandemic has been a “key development” for many of our quarterly reports over the last two years. The bad news is it made the list again due to the spike in cases driven by the Omicron variant. The better news is, thus far, hospitalizations and deaths have been much less severe. This fact, combined with a growing aversion to economic shutdowns and restrictions, allowed many risk assets to ignore this development. Going into 2022, COVID-19 is still something to watch, but not to be overly fearful of.

MARKET REVIEW

Interest Rates

Front-end rates rose as the Fed reduced pandemic emergency measures and pulled forward its rate hike projections in response to upside inflation risks. The 2-year Treasury yield nearly tripled during the quarter. Despite elevated short-rate volatility, the long end of the Treasury curve refused to follow suit. Back-end yields fell as markets priced in more rate hikes, and longer term inflation expectations barely budged during the quarter. Higher short rates and stubborn long-end behavior leave a flatter curve heading into 2022.

U.S. TREASURY YIELD CURVE

Credit Markets

Credit spreads widened during most of the quarter as heavy supply exacerbated performance headwinds that spilled over during periods of broader market volatility. Investment grade spreads recovered some but not all of that spread widening and ended the quarter 7 basis points (bps) wider. High yield spreads recovered all and more of the spread widening and ended 6 bps tighter. Credit risk proved to be more rewarding than interest rate risk as high yield returns outpaced investment grade returns in the quarter (and for the full year).

CREDIT SPREADS

Equities

Despite higher inflation and rising short-term interest rates, global equities finished the year strongly with a 6.8% quarterly return. Companies were largely able to pass on cost pressures, profit margins were durable and earnings marched higher. This was particularly true for U.S. companies, as U.S. equities returned 9.4%. Developed ex-U.S. equities reported similar earnings growth but greater Omicron-related pressure led to a more muted return (2.8%). Emerging market equities fell 0.9% on a mix of growth and regulatory headwinds.

REGIONAL EQUITY INDICES

Real Assets

Global real estate (GRE) finished the year strongly with an 8.9% quarterly return. After a weak 2020, GRE outperformed global equities in 2021 with help from moderating virus headwinds and falling longer term interest rates. In fact, since the 10-year Treasury yield peaked in March, GRE has returned 22.9% on an annualized basis. Natural resources also returned more than global equities on the quarter (7.3%) as commodity demand held up and investors took a liking to the asset class' inflation protection properties.
