Northern Trust Corporation Overview

Northern Trust Corporation (the Corporation) is a financial holding company that is a leading provider of wealth management, asset servicing, asset management, and banking solutions to corporations, institutions, families and individuals. The Corporation focuses on managing and servicing client assets through its two client-focused reporting segments: Asset Servicing and Wealth Management. Asset management and related services are provided to Asset Servicing and Wealth Management clients primarily by the Asset Management business. The Corporation conducts business through various U.S. and non-U.S. subsidiaries, including through its principal subsidiary, The Northern Trust Company. At December 31, 2025, the Corporation had consolidated total assets of \$177.1 billion and stockholders' equity of \$13.0 billion. Except where the context requires otherwise, the term "Northern Trust" means the Corporation and its subsidiaries on a consolidated basis.

Net Stable Funding Ratio

In October 2020, the U.S. banking agencies issued the final rule (NSFR Final Rule) for the calculation, reporting, and maintenance of the Net Stable Funding Ratio (NSFR). The NSFR rule is a quantitative liquidity measure of the sufficiency of an organization's funding stability and applicable regulation requires that an organization's available stable funding (ASF) used to calculate the ratio exceeds its required stable funding (RSF).

A bank's total ASF is the portion of its capital and liabilities that will remain with the institution for more than one year. The broad characteristics of an institution's funding sources and their assumed degree of stability are the basis for determining ASF. An ASF factor is assigned to the carrying value of each element of funding. ASF factors range from 0-100%; higher factors increase the numerator and NSFR.

The ASF factors broadly fall into the following categories based on the counterparty, tenor and product.

- 100% - the funding is expected to be fully available in more than a year (i.e., equity and certain debt);
- 90-95% - applies to very stable funding (i.e., retail deposits);
- 50% - is a relatively stable funding source (i.e., commercial deposits or operational deposits); and
- 0% - the funding from this source is unreliable (i.e., overnight funding).

The total amount of ASF is the sum of the ASF amounts for each category of capital and liability.

A bank's total RSF is the amount of stable funding that is required to be held given the liquidity characteristics and residual maturities of its assets and the contingent liquidity risk arising from its off-balance sheet exposures. For each item, the RSF amount is determined by assigning an RSF factor to the carrying value of the exposure. RSF factors range from 0-100%; higher factors increase the denominator and lower the NSFR.

The RSF factors broadly fall into the following categories based on counterparty, tenor, secured vs. unsecured lending, risk weight and product.

- 0% - applies to fully liquid assets including cash and Level 1 assets*;

Net Stable Funding Ratio Public Disclosure

- 5% - applies to undrawn legal commitments;
- 15% - applies to Level 2a assets* and short-term (less than 6 months) lending to financial counterparties;
- 50% - applies to Level 2b assets*, certain encumbered securities, and lending to non-financial counterparties;
- 65% and 85% - applies to retail mortgages, clients loans, and longer term lending; and
- 100% - applies to derivatives, all other assets, long-term loans, and securities encumbered over a year.

The total RSF amount is the sum of the RSF for each category.

The following restrictions apply to the inclusion of the ASF of any subsidiary of the Corporation in the calculation of the Corporation's consolidated NSFR:

- A subsidiary's ASF can be included in the Corporation's total ASF up to the amount of the subsidiary's RSF in the Corporation's consolidated NSFR calculation.
- Total ASF may only include ASF from a subsidiary in excess of the RSF of that subsidiary if such excess ASF is not affected by statutory, regulatory or supervisory restrictions.
- Excess subsidiary ASF that cannot be transferred is excluded from the Corporation's ASF in the consolidated NSFR calculation.

NSFR Public Disclosure Requirement

In February 2021, the Board of Governors of the Federal Reserve System issued the U.S. NSFR Disclosure Rule. Under this rule, the Corporation is required to disclose publicly, every second and fourth calendar quarter beginning with second quarter of 2023, quantitative information about its NSFR calculation and a qualitative discussion of the factors affecting its NSFR.

This public disclosure contains the Corporation's NSFR quantitative and qualitative information for the period ended December 31, 2025, which includes the previous two quarters of 2025 for reporting. The Corporation's average daily NSFR was 118% for the third quarter which covers July 1 to September 30, 2025, and 120% for the fourth quarter of 2025 which covers October 1 to December 31, 2025.

The Corporation's average NSFR may fluctuate period-over-period due to normal business activity driven by client activity, management decisions and market conditions.

(*) An organization's total high-quality liquid assets ("HQLA") are comprised of three categories: Level 1 liquid assets, Level 2a liquid assets and Level 2b liquid assets. Level 2a liquid assets and Level 2b liquid assets are subject to prescribed factors of 15% and 50%, respectively, as they are considered less liquid than Level 1 assets which have a 0% factor.

Northern Trust Corporation NSFR - Qualitative

Eligible ASF:

The Corporation's balance sheet is primarily liability-driven. That is, the main driver of balance sheet changes comes from changing levels of client deposits, which are generally related to the level of global custody assets serviced and commercial and personal deposits and can also be influenced by market conditions. This liability-driven business model differs from a typical asset-driven business model, where increased levels of deposits and wholesale borrowings are required to support, for example, increased levels of lending. The liability-driven balance sheet is reflected in the Corporation's NSFR ASF along with the Corporation's NSFR capital elements which include equity and qualified debt instruments.

Eligible RSF:

The Corporation's balance sheet includes liquid short-term money market assets and investment securities, both providing a strong source of liquidity. The other components of RSF include non-HQLA securities, loans, commitments, NSFR net derivatives and other assets.

Third Quarter of 2025:

For the third quarter of 2025, the Corporation's average weighted ASF was \$62.5 billion. The largest driver of this total was wholesale funding including operational deposits, which are driven by the Corporation's institutional clients. Average weighted operational deposits was \$28.1 billion and other wholesale funding was \$14.5 billion. Retail Deposits was \$10.5 billion and Regulatory Capital was \$17.3 billion. Excess ASF at subsidiaries that is not eligible to be transferred was \$7.9 billion.

The Corporation's total eligible average weighted RSF was \$52.9 billion. Total eligible average weighted HQLA liquid assets was \$2.8 billion and the Corporation's loans and non-HQLA investment securities was \$32.7 billion. The net derivative exposure was \$1.1 billion and the undrawn commitments was \$1.4 billion. The required operational balances was \$0.5 billion. The other assets category consisting of various long-term and short-term assets, including receivables, bank premises, goodwill, software and other items, was \$14.3 billion.

Fourth Quarter of 2025:

For the fourth quarter of 2025, the Corporation's average weighted ASF was \$63.7 billion. The largest driver of this total was wholesale funding including operational deposits, which are driven by the Corporation's institutional clients. Average weighted operational deposits was \$28.2 billion and other wholesale funding was \$15.8 billion. Retail Deposits was \$10.6 billion and Regulatory Capital was \$17.9 billion. Excess ASF at subsidiaries that is not eligible to be transferred was \$8.8 billion.

The Corporation's total eligible average weighted RSF was \$52.9 billion. Total eligible average weighted HQLA liquid assets was \$2.8 billion and the Corporation's loans and non-HQLA investment securities was \$32.6 billion. The net derivative exposure was \$0.8 billion and the undrawn commitments was \$1.5 billion. The required operational balances was \$0.5 billion. The other assets category consisting of various long-term and short-term assets, including receivables, bank premises, goodwill, software and other items, was \$14.8 billion.

Northern Trust's quarter-over-quarter ASF increase of \$1.2 billion was mainly due to increases of \$1.3 billion in wholesale funding, \$0.6 billion in regulatory capital, and \$0.2 billion in retail deposits offset by trapped ASF increase of \$0.9 billion. The RSF quarter-over-quarter was flat

Net Stable Funding Ratio Public Disclosure

mainly due an increase of \$0.5 billion in Other Assets and offset by declines of \$0.1 billion in Loans and \$0.3 billion in the derivatives portfolio.

Risk Management Overview

Northern Trust employs an integrated risk management framework to enable a risk-informed profile and support its business decisions and the execution of its corporate strategies. The framework provides a methodology to identify, manage, report and govern both internal and external risks to Northern Trust, and promotes a culture of risk awareness and good conduct across the organization. Northern Trust's risk culture encompasses the general awareness, attitude and conduct of employees with respect to risk and the management of risk across all lines of defense within the organization. Northern Trust cultivates a culture of effective risk management by defining and embedding risk management accountabilities in all employee performance expectations and provides training, development and performance rewards to reinforce this culture.

Northern Trust's risk management framework contains three inter-related elements, designed to support consistent enterprise risk identification, management and reporting: a comprehensive risk inventory, a static taxonomy of risk categories and a dynamic taxonomy of risk themes. The risk inventory is a detailed register of the risks inherently faced by Northern Trust. The risk categories and risk themes are classification systems used for classifying and managing the risk inventory and enabling different risk profile views. All identified risks inherent in Northern Trust's business activities are cataloged into the following risk categories: credit, operational, technology and cyber, fiduciary, compliance, liquidity, market, and strategic risk. All material risks are also dynamically cataloged into various risk themes which are defined groupings that share common characteristics, focus on business outcomes and span across risk categories.

Northern Trust implements its risk management framework through a "three lines of defense" operating model, embedding a robust risk management capability within its businesses. The model, used to communicate risk management expectations across the organization, contains three roles, each with a complementary level of risk management accountability. Within this operating model, Northern Trust's businesses are the first line of defense for protecting it against the risks inherent in its businesses and are supported by dedicated business risk management teams. The Risk Management function, the second line of defense, sets the direction for Northern Trust's risk management activities and provides aggregate risk oversight and reporting in support of risk governance. Audit Services, the third line of defense, provides independent assurance as to the effectiveness of the integrated risk framework.

Liquidity Risk Management

Liquidity risk is the risk of not being able to raise sufficient funds or maintain collateral to meet balance sheet and contingent liability cash flow obligations when due, because of firm-specific or market-wide stress events. Northern Trust is a Category II institution as defined by the Federal Reserve Board which requires us to adhere to the same regulatory liquidity standards as U.S. Global Systemically Important Banks (GSIBs). In adhering to these standards, Northern Trust engages in a range of reporting and other activities with regulators to affirm our financial strength and stability, including but not limited to, daily Liquidity Coverage Ratio (LCR), NSFR, and monthly Liquidity Stress-Testing calculations to regulators.

Northern Trust maintains a strong liquidity position and liquidity risk profile. Northern Trust's balance sheet is primarily liability-driven. That is, the main driver of balance sheet changes comes from changing levels of client deposits, which are generally related to the level of custody assets serviced and commercial and personal deposits and can also be influenced by market conditions. This liability-driven business model differs from a typical asset-driven business

model, where increased levels of deposits and wholesale borrowings are required to support, for example, increased levels of lending. Northern Trust's balance sheet is generally comprised of high-quality assets that are managed to meet anticipated obligations under stress, resulting in low liquidity risk.

Liquidity Risk Framework and Governance

Northern Trust maintains a liquidity risk framework consisting of risk management policies and practices to keep its risk profile within the Board-approved Corporate Risk Appetite Statement. All liquidity risk activities are overseen by the Risk Management function, which is independent of the businesses undertaking the activities.

The Liquidity Management Policy and exposure limits for liquidity risk are set by the Board of Directors, and committee structures have been established to implement and monitor adherence to corporate policies, external regulations and established procedures. Limits are monitored based on measures such as the LCR, the NSFR, and the liquidity stress-testing buffer across a range of time horizons. Treasury, in the first line of defense, proposes liquidity risk management strategies and is responsible for performing liquidity management activities. The Asset and Liability Management Committee (ALCO) provides first-line management oversight and is responsible for approving strategies and activities within the risk appetite, monitoring risk metrics, overseeing balance sheet resources, and reviewing reporting such as cash flows, LCR, NSFR, and stress test results.

Market and Liquidity Risk Management, in the second line of defense, provides challenge to the first-line activities, evaluates compliance with regulatory requirements and process effectiveness, and escalates material items for corrective action. The Market and Liquidity Risk Committee (MLRC) provides second-line oversight and is responsible for reviewing market and liquidity risk exposures, approving and monitoring risk metrics, and approving key methodologies and assumptions that drive liquidity risk measurement.

Liquidity Risk Analysis, Monitoring, and Reporting

Liquidity risk is analyzed and monitored in order to ensure compliance with the approved risk appetite. Various liquidity analysis and monitoring activities are employed by Northern Trust to better understand the nature and sources of its liquidity risks, including: liquidity stress testing, liquidity metric monitoring, collateral management, intraday management, cash flow projections, operational deposit modeling, liquid asset buffer measurement, funds transfer pricing, and contingency funding planning.

The liquidity risk management process is supported through management and regulatory reporting. Both Northern Trust's Treasury and Market and Liquidity Risk Management functions produce management reports that enable oversight bodies to make informed decisions and support management of liquidity risk within the approved risk appetite. Holistic liquidity metrics such as LCR, NSFR and internal liquidity stress testing are actively monitored, along with a suite of other metrics that provide early warning indicators of changes in the risk profile.

Forward-Looking Statements

This document may include statements which constitute “forward-looking statements” within the meaning of the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. Forward-looking statements are identified typically by words or phrases such as “believe,” “expect,” “anticipate,” “intend,” “estimate,” “project,” “likely,” “plan,” “goal,” “target,” “strategy,” and similar expressions or future or conditional verbs such as “may,” “will,” “should,” “would,” and “could.” Forward-looking statements include statements, other than those related to historical facts that relate to the Corporation’s net stable funding ratio, factors influencing such ratio and its components and the Corporation’s management of such ratio and its components. These statements are based on the Corporation’s current beliefs and expectations of future events or future results, and involve risks and uncertainties that are difficult to predict and subject to change. These statements are also based on assumptions about many important factors, including the factors discussed in the Corporation’s most recent annual report on Form 10-K and other filings with the U.S. Securities and Exchange Commission, all of which are available on the Corporation’s website. We caution you not to place undue reliance on any forward-looking statement as actual results may differ materially from those expressed or implied by forward-looking statements. The Corporation assumes no obligation to update its forward-looking statements.
