- Secured web access
- Portfolio summary
- Transactions and tax lot details
- Online statements
- Administrative tools

**Reporting Engine**
- Extensive built-in reports
  - Administrative
  - Operational
  - Audit
  - Tax
- Robust ad-hoc query tool

**Third-Party Data Aggregation Tools**
- Built-in custody interface
- Import transactions and holding information
- Segregated accounting for third-party assets
- Portfolio management on total assets
INCREASE PRODUCTIVITY

TrustPortal provides online access to the most current account information, customized by user. Easy-to-use widgets increase productivity. Staff members – portfolio managers, administrators, managers, operations associates and others – can customize dashboards to their specific responsibilities.

BETTER-INFORMED CLIENTS

TrustPortal client reporting gives your clients secured, online access to view their daily account information and monthly statements. Your client reporting website is accessible via your corporate website, and is custom-designed to include your corporate color scheme and logo.

Client representatives and authorized third parties – such as accountants and attorneys – also can be granted access. With TrustPortal’s advanced reporting capabilities, your employees, clients and authorized third parties also can create and save custom reports through an easy-to-use interface.
You also gain an efficient, effective tool to maintain models and benchmarks and align portfolios with current investment objectives. Users can define reports by a number of aggregation levels, including instrument class, sector, maturity and rating.

TrustPortal helps your organization efficiently monitor investment policy compliance rules for client portfolios. To assist with pre-trade monitoring, users can build and maintain a full policy compliance library at the account level.

The Investment Planning tool is fully integrated within TrustPortal to help you enhance client acquisition and retention. The tool provides you with client questionnaires to assess goals, objects and risk. Based on this, you can create a model or attach the existing model from Investment Management that best fits your client’s needs.

**Client Profile Report**

This Word-formatted report displays:
- Client name
- Primary and secondary contact details
- Account information
- Holdings details
- Planning asset class
- Goal payouts
- Risk questionnaire
- Composite risk score
- Dedicated account for specific goals

**Model Optimization**

This offers you the ability to evaluate and create an optimized model based on the selected scenario, risk factor and constraints, expressed as percentages. An optimized model is represented as percentage breakdowns across the configured planning asset classes. An optimization engine provides an efficient frontier based on the selected scenario, and may potentially be used to develop new models.

ACCOUNT REVIEWS

TrustPortal lets you review each account’s compliance with its investment guidelines on a scheduled or ad-hoc basis. You can easily navigate through the entire life cycle of a review, check guideline compliance and make needed changes.

- **Review** brief snapshots that break down each account’s holdings by asset class
- **Identify** any variance from the investment objective and model portfolio
- **Drill-down** into holdings to review specific weightings
- **View** transactions
- **Open** tax lots

SIMPLICITY, SECURITY

Offered as an SAS-70 or self-hosted application, TrustPortal is flexible to meet your needs. With hosted TrustPortal, Fi-Tek maintains your technology infrastructure at its secured SAS-70 datacenter to:

- **Reduce** complexity
- **Provide** 24/7 connectivity
- **Support** disaster recovery needs
